Executive Summary

Problem

Existing commodity exchanges are exclusive, expensive and inefficient

Innovation

Blockchain technology gives us an opportunity to disrupt the existing exchanges, opening them up and reducing inefficiencies

Our aim

Capture 5% of existing trading by 2020. That's a US\$100 billion opportunity. ChainTrade is scalable and is capable of growing far beyond our initial targets

CTC Tokens

Used for trading and the demand for tokens will appreciate as a result of a greater adoption and use of the token

Regulation & governance

Compliance is key to ChainTrade's success and our regulated token gives the assurances traders need to make the switch

Exclusive opportunity

Early contributors have a unique opportunity to participate in our token launch to support and profit from the growth of our disruptive technology

Our vision

ChainTrade will be the world's most efficient,
lowest-cost and most accessible commodity
derivatives exchange

Commodity exchanges are ripe for change

A few exchanges dominate the US \$2 trillion commodities markets

	 CME Group	 ICE	 香港交易所
	Chicago Mercantile Exchange	Intercontinental Exchange	Hong Kong Exchange
Annual revenue	\$3.6bn	\$4.5bn	\$1.4bn
Net profit	\$1.5bn	\$1.6bn	\$0.7bn

Today's food and raw materials exchanges are

CENTRALIZED

All exchanges are concentrated within a few market places in the world

EXPENSIVE

As a result of the concentration, fees are high for traders and producers

EXCLUSIVE

Only major banks and investors can access, bigger players get better fees and conditions

- The first blockchain-based commodities exchange
- No middle-men and lower fees
- Accessible to all, ending the exclusive access that characterizes today's centralized exchanges
- Commitment to strong corporate governance with a target to obtain a Singapore trading license in April 2018
- Aim to capture 5% (US\$100 billion) of the global commodity derivatives market by 2020
- Fees cut by more than half for producers, buyers and traders
- Easy and equal access to anyone in the world (no favored terms)

The disruptive power of ChainTrade

A team you can count on

Led by Vincent Jacques, a successful AI entrepreneur (\$25 million startup, Planorama)

ChainTrade has put together a formidable team of executives and advisers

Engaged experienced blockchain developers to build the technology that powers ChainTrade

A globally-sourced team of venture capitalists, financial services and enterprise experts provide the contacts we need to challenge the highly-entrenched commodities markets

Our advisory team includes Philippe Tastevin, former Director of Strategy at NYSE & Euronext and Jacques Puzey's co-founder and former CEO of Nasdaq Europe

Engaged global law firm Morgan, Lewis & Bockius LLP

How ChainTrade works

Smart contracts enable anyone to create new futures and options

A decentralized ecosystem

Counterparty risk is covered by 'insurers'

Independent arbitrators settle disputes

A small fee is charged for each transaction

Ensuring liquidity and volumes

First products listed will be fungible with products listed on existing exchanges

Token Sale

ICO Token Distribution

Token Sale is now live

Price is 1 ETH for
1,000 CTC

Target is to raise
\$10m

Unsold tokens will be burnt

Sale
proceeds
will be
used for

- Development of the core platform (scalability)
- Multiplatform support (user interfaces)
- Legal services for regulatory approvals
- Sales & Marketing to attract users: producers, industrial buyers, traders
- Strategic partnerships in the finance industry
- Administration and operations

Current status and roadmap

December 2016	Start of ChainTrade project
July 2017	First prototype ready
September 2017	Legal entity established in Singapore
October 2017	Token Sale
December 2017	Token trading launch
March 2018	Public beta launch
April 2018	Trading license
July 2018	Platform launch
August 2018	Intensive marketing & sales
July 2020	5% market share

ChainTrade Development - Progress Update

Prototype currently entails

- Creation of smart contracts - representing futures and options
- List all futures and options, see the prices and detailed characteristics
- Send BUY and SELL orders
- Review the order book
- Match orders and quote contracts

Built on top of the Ethereum

- Widely adopted and recognized technology
- However we keep the option to switch to another blockchain (or build our own) if Ethereum's constraints ever prove to be too high for scalability

Challenges currently being solved

- Transaction cost on the Ethereum network - working on grouping transactions to reduce the cost
- Time lag to register transactions on the blockchain - we decided to match orders and quote products every 5 minutes, not in real time

Working prototype is ready

Contract	Clear Port	Name	Group	Subgroup	Cleared As	Volume	Open Interest
ERBDB	SO	Soybean Oil Options	Agriculture	Grain And Oilseed	Options	307,276	2,576,977
